

Edit an AI Artwork – Assignment 3

Visualize any artwork that you wish to create.

Then describe it – basically create a ‘prompt’.

With any AI art creation tool you choose, use this prompt to build a set of visualizations. If the prompt does not yield what you were looking for, edit it until you get something you can use.

Select the visualization that you think best illustrates your idea and either draw or paint it in the way you would improve it, or use digital tools to make the visualization more like your idea.

Hand in: A sketch of your original idea, if you can, and your prompt. Hand in thumbs of all AI generated works, first those you did not use, and changes to the prompt and new visuals, and the final image you selected. Finally, hand in your completed work.

Example: I want a drawing of a couple of children, a boy and a girl, facing each other, touching hands.

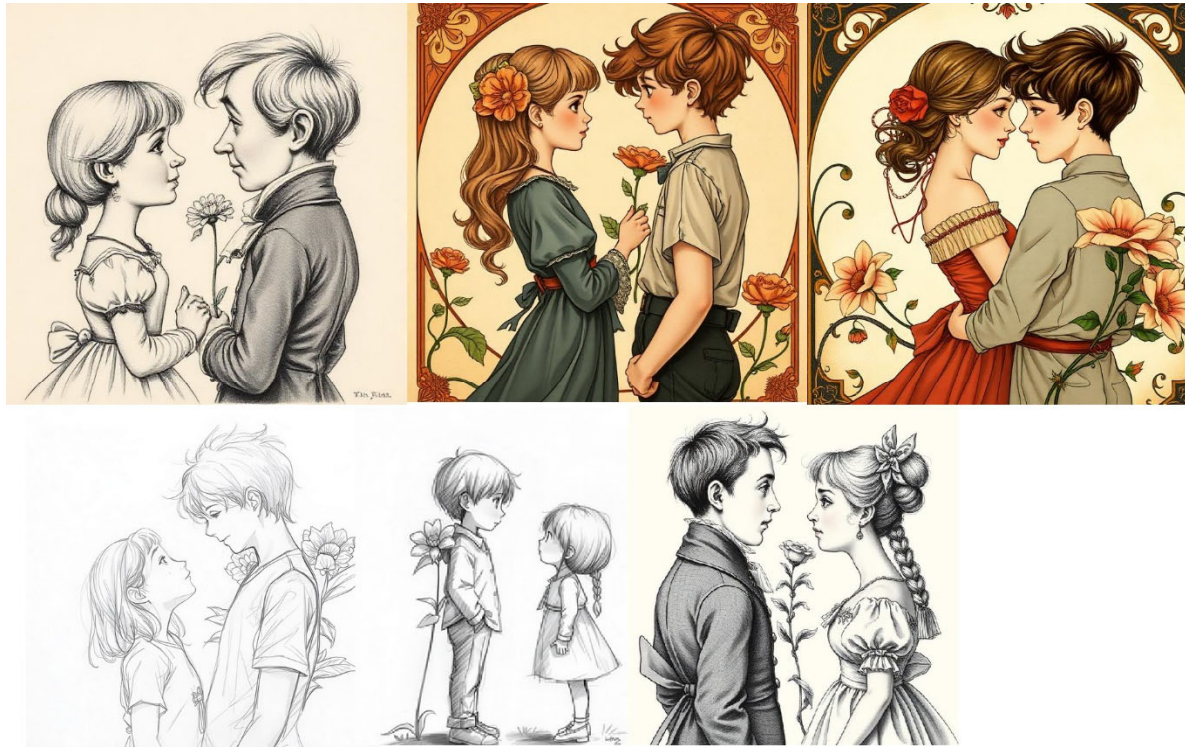

THIS one is two girls.

boy and girl facing each other boy with a flower behind his back

boy and girl facing each other boy holding a flower behind his back

Don't like any of these. How about a drawing of a couple of children, a boy and a girl, facing each other. The boy is holding a flower behind his back.

Nope.

Try:

boy and girl facing each other

Boy holding a flower behind his back

As two prompts.

Edit them together.

Now we can draw this!

Not exactly what I wanted,
but perhaps close enough.
